Bitcoin-backed dollar invoices you share as a link.

Wave 2: **“Was I really paid?”** answered by the chain, never by the message.

SURVEY · FACEDEV GROUP · OCT 28–30, 2026

Getting paid from abroad mostly works. Trust is what is left.

10

Malagasy developers answered

9

were paid from abroad in the last 12 months

8 of 9

say their last payment from abroad went fine

What still hurts: days of waiting to be sure the money arrived, a client saying “I paid” while nothing came, a fake proof of payment, a bitcoin payment lost to a reseller.

A SMALL, SELF-SELECTED SAMPLE FROM ONE GROUP: NOT REPRESENTATIVE OF MALAGASY FREELANCERS.

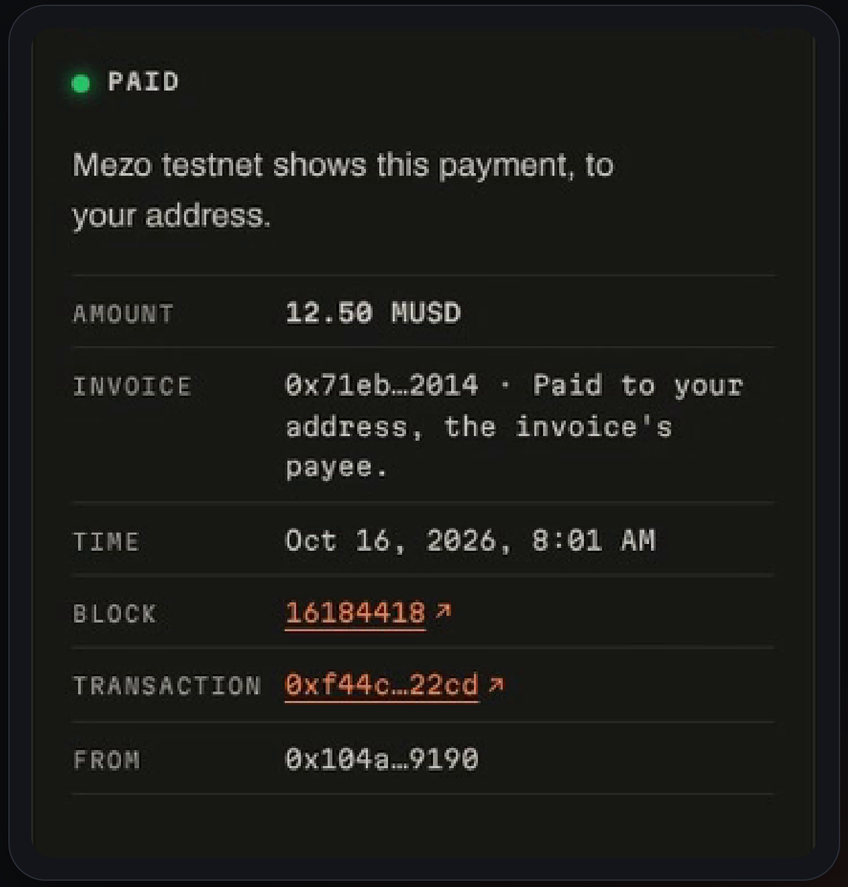

LIVE ON MEZO TESTNET

“Was I really paid?”

The seller pastes what the client sent: a message, a transaction hash, a PayLink link. The verdict comes from Mezo testnet only.

- Paid
- Not received
- Pending
- Can't tell yet

Not received says why: a made-up hash, a payment to someone else, an unpaid or cancelled invoice, a replayed or forged receipt.

NO AI · NO SERVER · THE TEXT NEVER LEAVES THE DEVICE

The message is only a pointer. The chain is the proof.

1 · PASTE

The client's message

Text, a screenshot's text, a hash, an invoice or receipt link.

→

2 · EXTRACT

Fixed rules in code

Hashes, links, amounts and tokens: MUSD, dollars, BTC, sats.

→

3 · CHECK

Mezo testnet

The receipt's Paid event from PayLinkV2, or the invoice's state on chain.

→

4 · VERDICT

To your own address

Exact amount, token, block, time, payer and invoice.

Also new: “Paste the client's message” fills the invoice's amount and validity by fixed rules (English, French, Malagasy).

HONEST STATUS

Working on testnet, tested, not yet used by real clients.

- **Contract** PayLinkV2 deployed and source-verified on Mezo testnet (0x448e…5082).
- **Tests** 12 new unit tests, and an end-to-end test on a fork of Mezo testnet with the real MUSD: a real hash, a fake one, an unpaid invoice, a replayed receipt.
- **Accessible** English, French and Malagasy; phone to desktop; light and dark.
- **Not yet** no users or pilot, no audit, no mainnet. PayLink does not convert MUSD to ariary.

FROM TESTNET TO A PILOT

Next waves

BY NOV 22	**Testnet pilot of “Was I really paid?”** with 3 to 5 volunteers from the surveyed group, reported as counts; Malagasy copy reviewed.
BY NOV 29	**The AI drafting assistant on Mezo**, once its server accepts the Mezo app; the fixed-rules helper stays as the fallback.
BY DEC 13	**Bitcoin wallets as payers** (Mezo Passport) prototyped on testnet, after a licence review.
LATER	**Mainnet only after a third-party audit.** Today the payer's gas is BTC and Mezo's minimum deposit is about 0.01 BTC.
